# EVOLUTION OF AI

## Assistive AI Agents

**Assistive** - supports human tasks

**General-purpose** – designed for broad use cases

**Human-driven** - relies on prompts

**Reactive** - responds to input

**Embedded in apps** - adds intelligence to tools

**Productivity boost**

## Autonomous Agents

**Executive** - performs tasks end-to-end

**Industry-focused** – designed for vertical workflows

**Goal-driven** - acts on objectives autonomously

**Proactive** - initiates actions and decisions

**Acts as service** - replaces apps with outcomes

**Execution engine**

# AI Studio Twin

Empower every employee to build AI Agents without requiring technical expertise

**Describe Your Goal**  
Tell AI Studio Twin what you want to achieve

**Watch It Build**  
Agents, workflows, skills are assembled automatically

**Refine Together**  
Collaborate through natural conversation and feedback

**Deploy with Confidence**  
Built-in governance, security, and best practices

# Demo Scenario: AI-Powered Expense Management

Kirill is responsible for modernizing internal finance operations and delivering solutions that improve employee productivity, financial controls, and compliance. His team supports expense management processes used across the organization.

**KIRILL KRYLOV**

Finance IT

## Business Challenge

Organizations spend significant time processing employee expenses, validating receipts, and ensuring compliance with company policies.

### As a result:

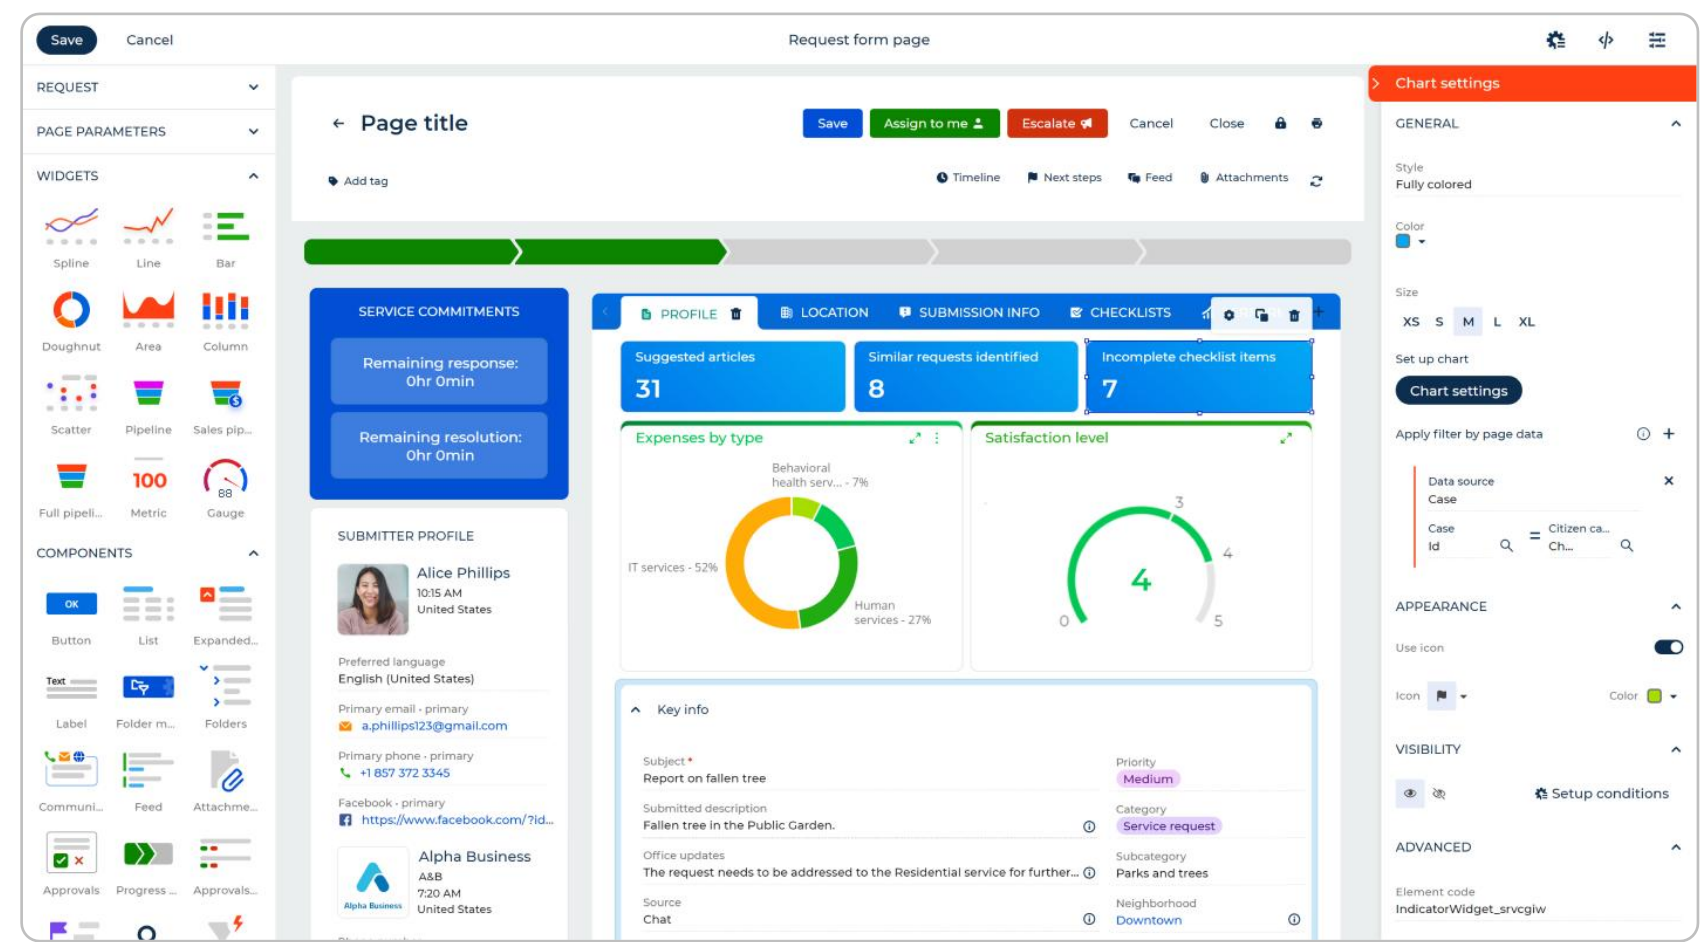

- Administrative effort remains high
- Errors and inconsistencies occur frequently
- Compliance validation is difficult to scale
- Finance teams spend valuable time on manual review and processing

**Desired Future State:** Transform expense management from a manual administrative process into an intelligent, AI-driven workflow

# Creatio.ai powering the next wave of no-code and AI development

ACCELERATING DEVELOPMENT 10X

# Design Reimagined

**DESIGN**

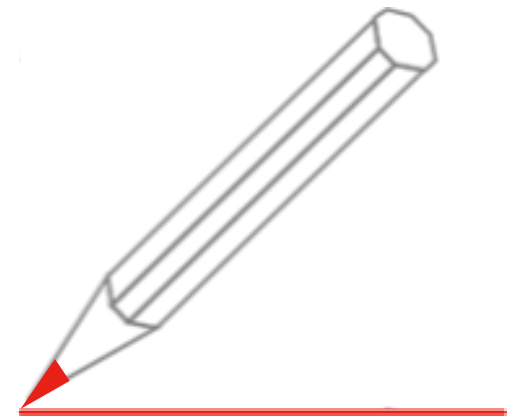

# Reimagine the way you iteratively design, prototype and scope MVP

## No-code Development

- Discover and validate Finance stakeholder requirements
- Prototype a functional expense management app
- Model expense reports, receipts, approvals, and dashboards
- Iterate rapidly with Finance and Accounting users
- Define and validate the initial MVP before development investment

## AI-driven Development Lifecycle

- Use Coding Agents to generate the initial application from natural language
- Rapidly create data models, pages, logic and dashboards
- Expand MVP scope with features that would traditionally be deferred
- Shift from prototyping concepts to validating working business solutions

**DESIGN**

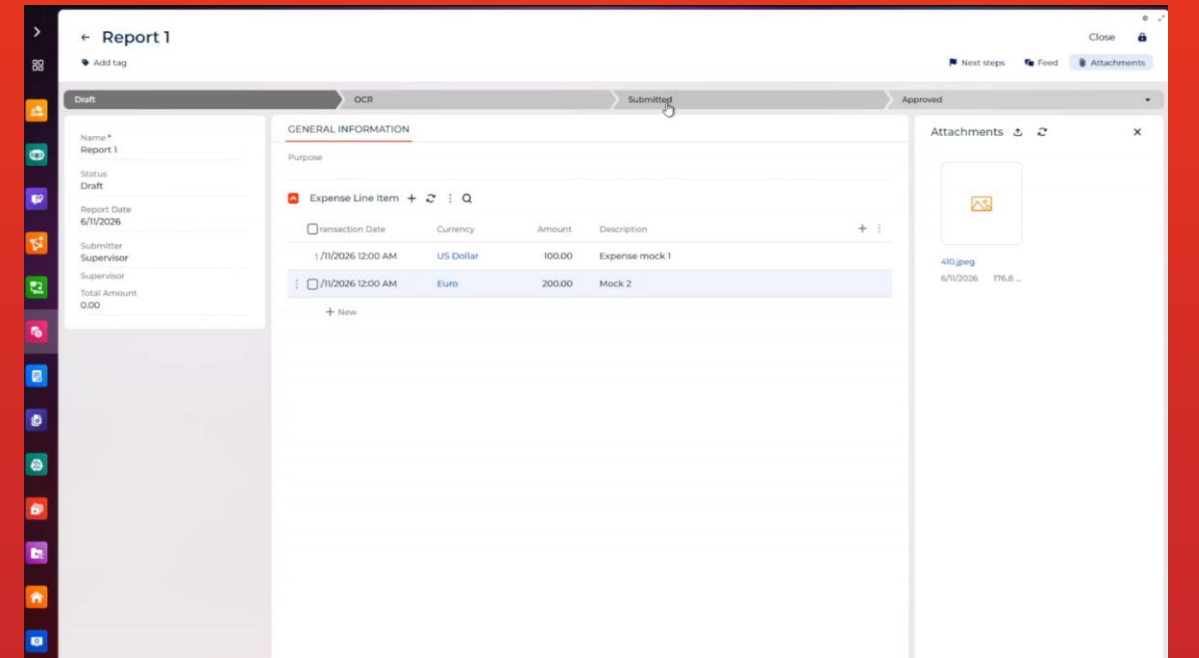

# Reimagine the way you iteratively design, prototype and scope MVP

demo

You are working in the `clio` workspace, this is an empty template with the default `clio` structure. The package you are working in is called `ExpenseReport`, already created, the environment you are working on is called `omen-demo`.

We are building a `Creatio` package dedicated to handling expense reports. The application is brand new and has not been installed on the target environment. The environment is not in file system mode.

The package needs to define a new section, for the expense reports, and the expense report will be submitted by user our through API, or manually entered, there must be a form page to enter data.

I want be able to store some user input in a form of an unlimited length text to describe the purpose or nature of the expense, for example (dinner with a client, or trip to an event, or some other longer explanation).

ACCELERATING DEVELOPMENT 10X

# Go-Live Reimagined

**GO-LIVE**

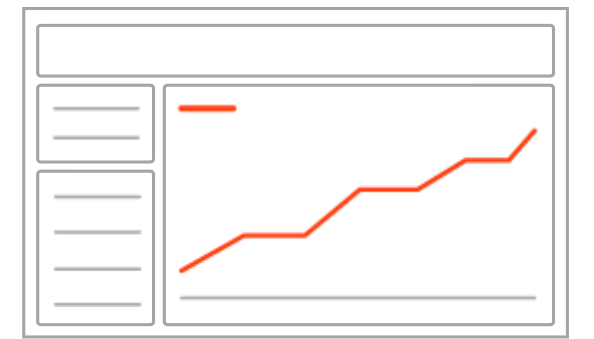

# Reimagine the way you accelerate deployment & enterprise readiness

## No-code Development

- Configure the expense management application for production
- Refine forms, dashboards, approvals, and user experience
- Validate the solution with business and IT stakeholders
- Integrate finance, vendor, and compliance data sources
- Prepare the application for enterprise rollout

## AI-driven Development Lifecycle

- Enhance the app with an Expense Processing Agent
- Automatically extract, classify, and validate receipt data
- Improve accuracy through vendor, currency, and VAT validation
- Deliver a production-ready intelligent AI-powered business process in first release

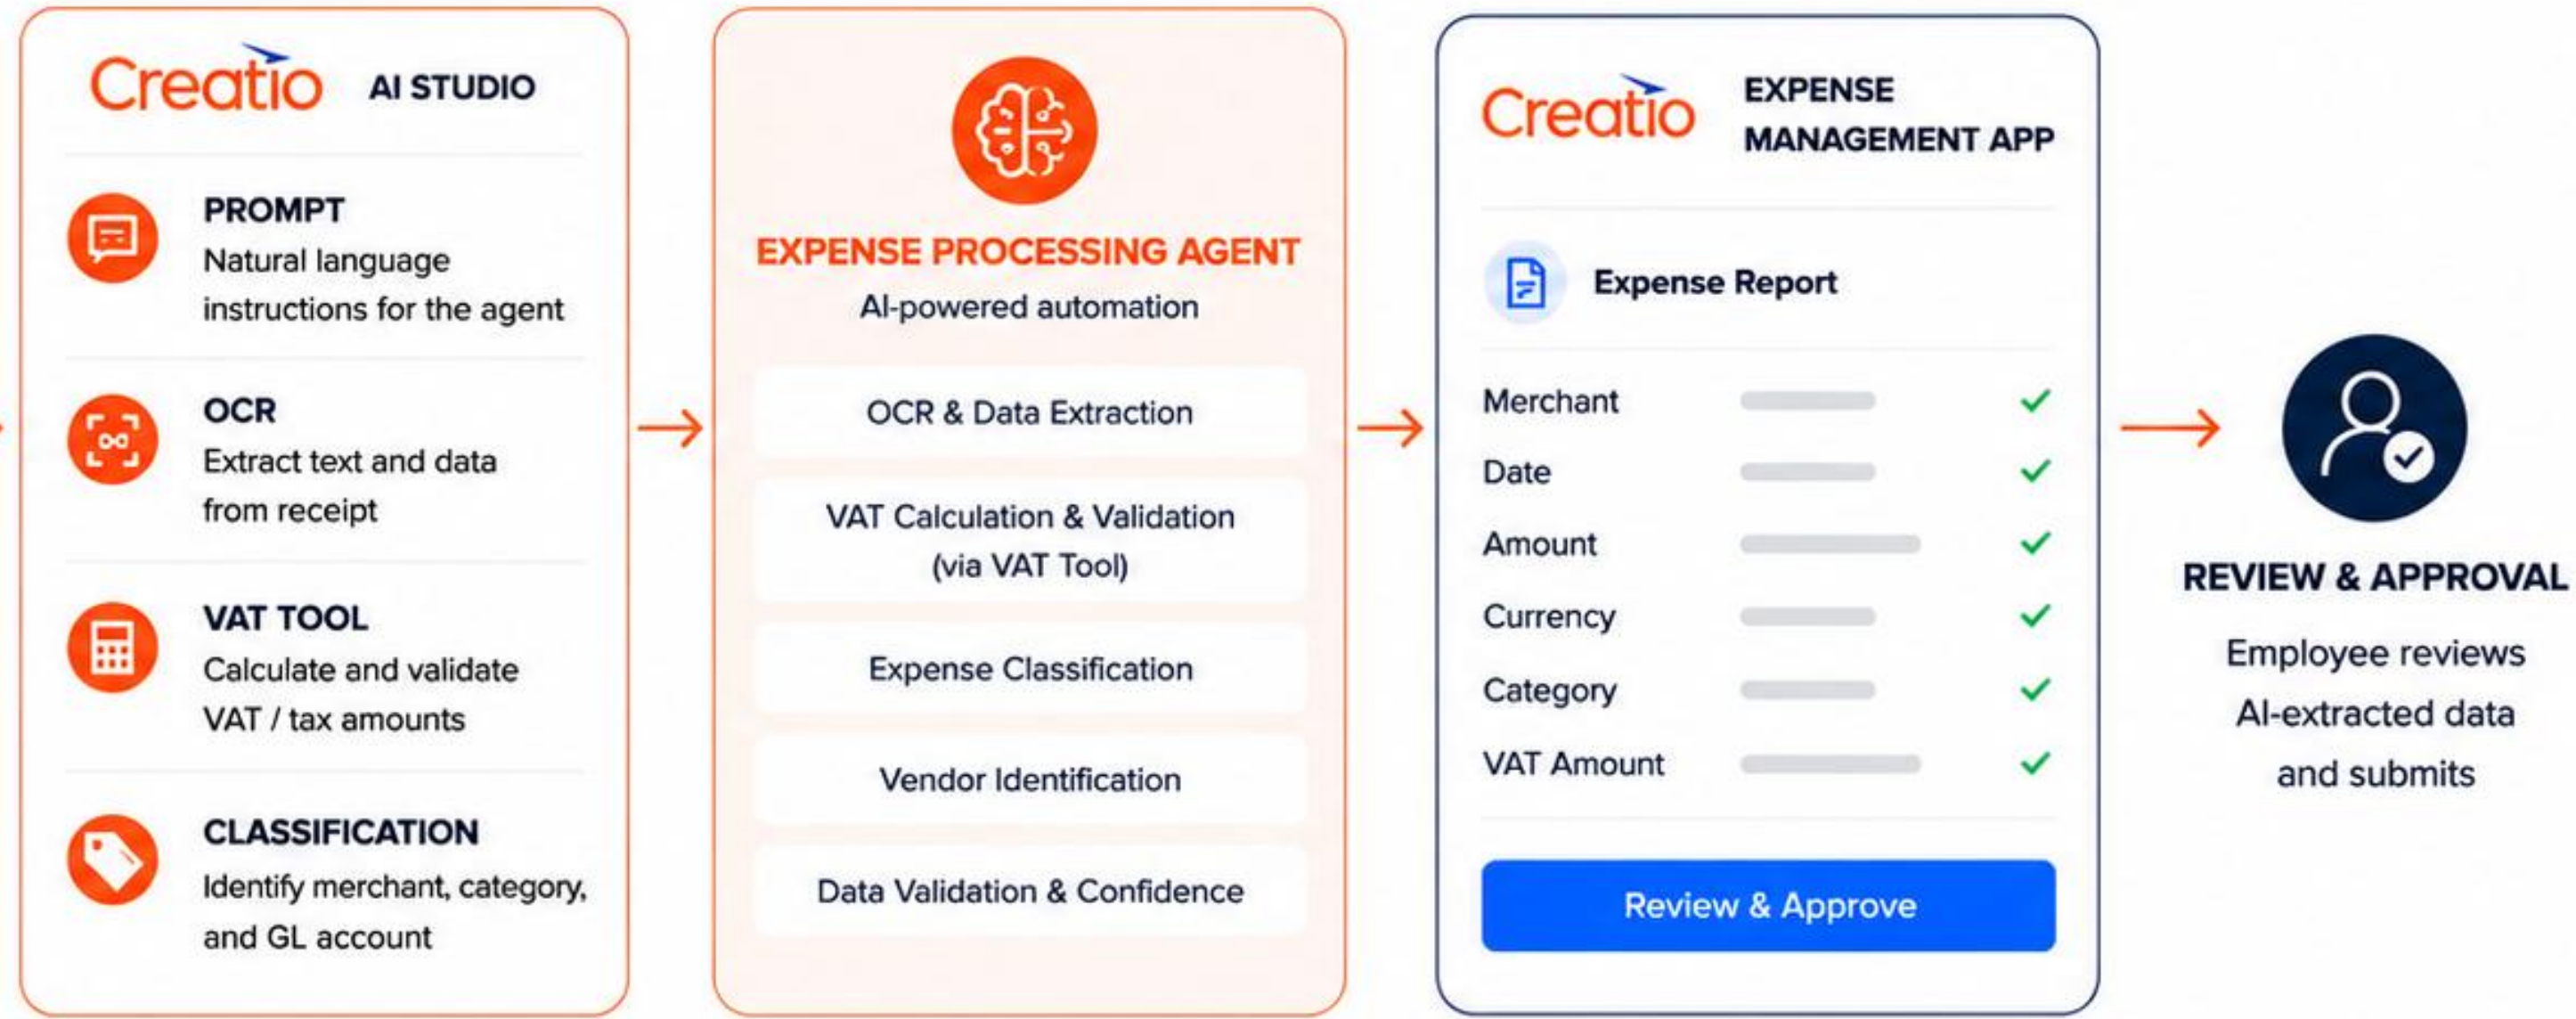

**GO-LIVE**

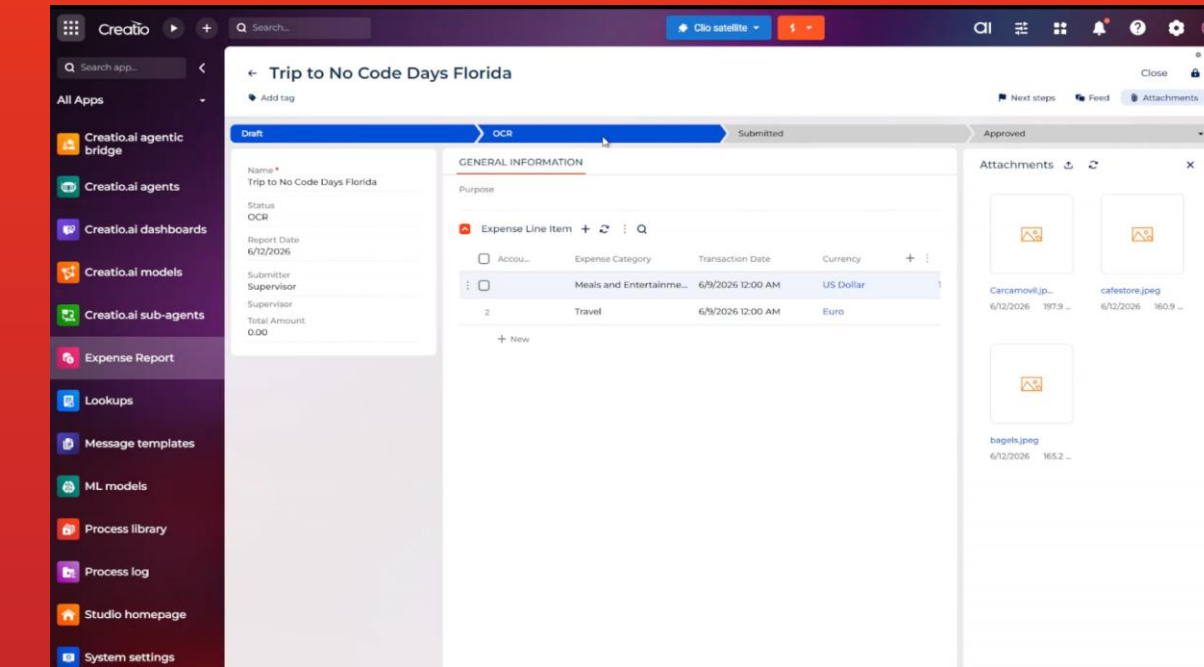

# Reimagine the way you accelerate deployment & enterprise readiness

ACCELERATING DEVELOPMENT 10X

# Everyday Delivery Reimagined

**EVERYDAY DELIVERY**

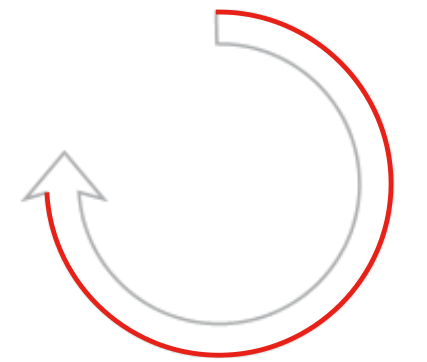

Reimagine the way your business continuously improves every day

## No-code Development

- Refine forms, approvals, and user workflows based on business feedback
- Extend dashboards, reporting, and expense visibility
- Adapt policies and processes as requirements evolve
- Reduce dependency on traditional development cycles
- Continuously improve the solution after go-live

## AI-driven Development Lifecycle

- Evolve Expense Processing Agent into a Workflow Agent
- Add more validation, compliance, and approval steps
- Increase governance, observability, and control
- Enable independent teams to manage individual workflow components
- Scale from simple automation to enterprise-grade agentic processes

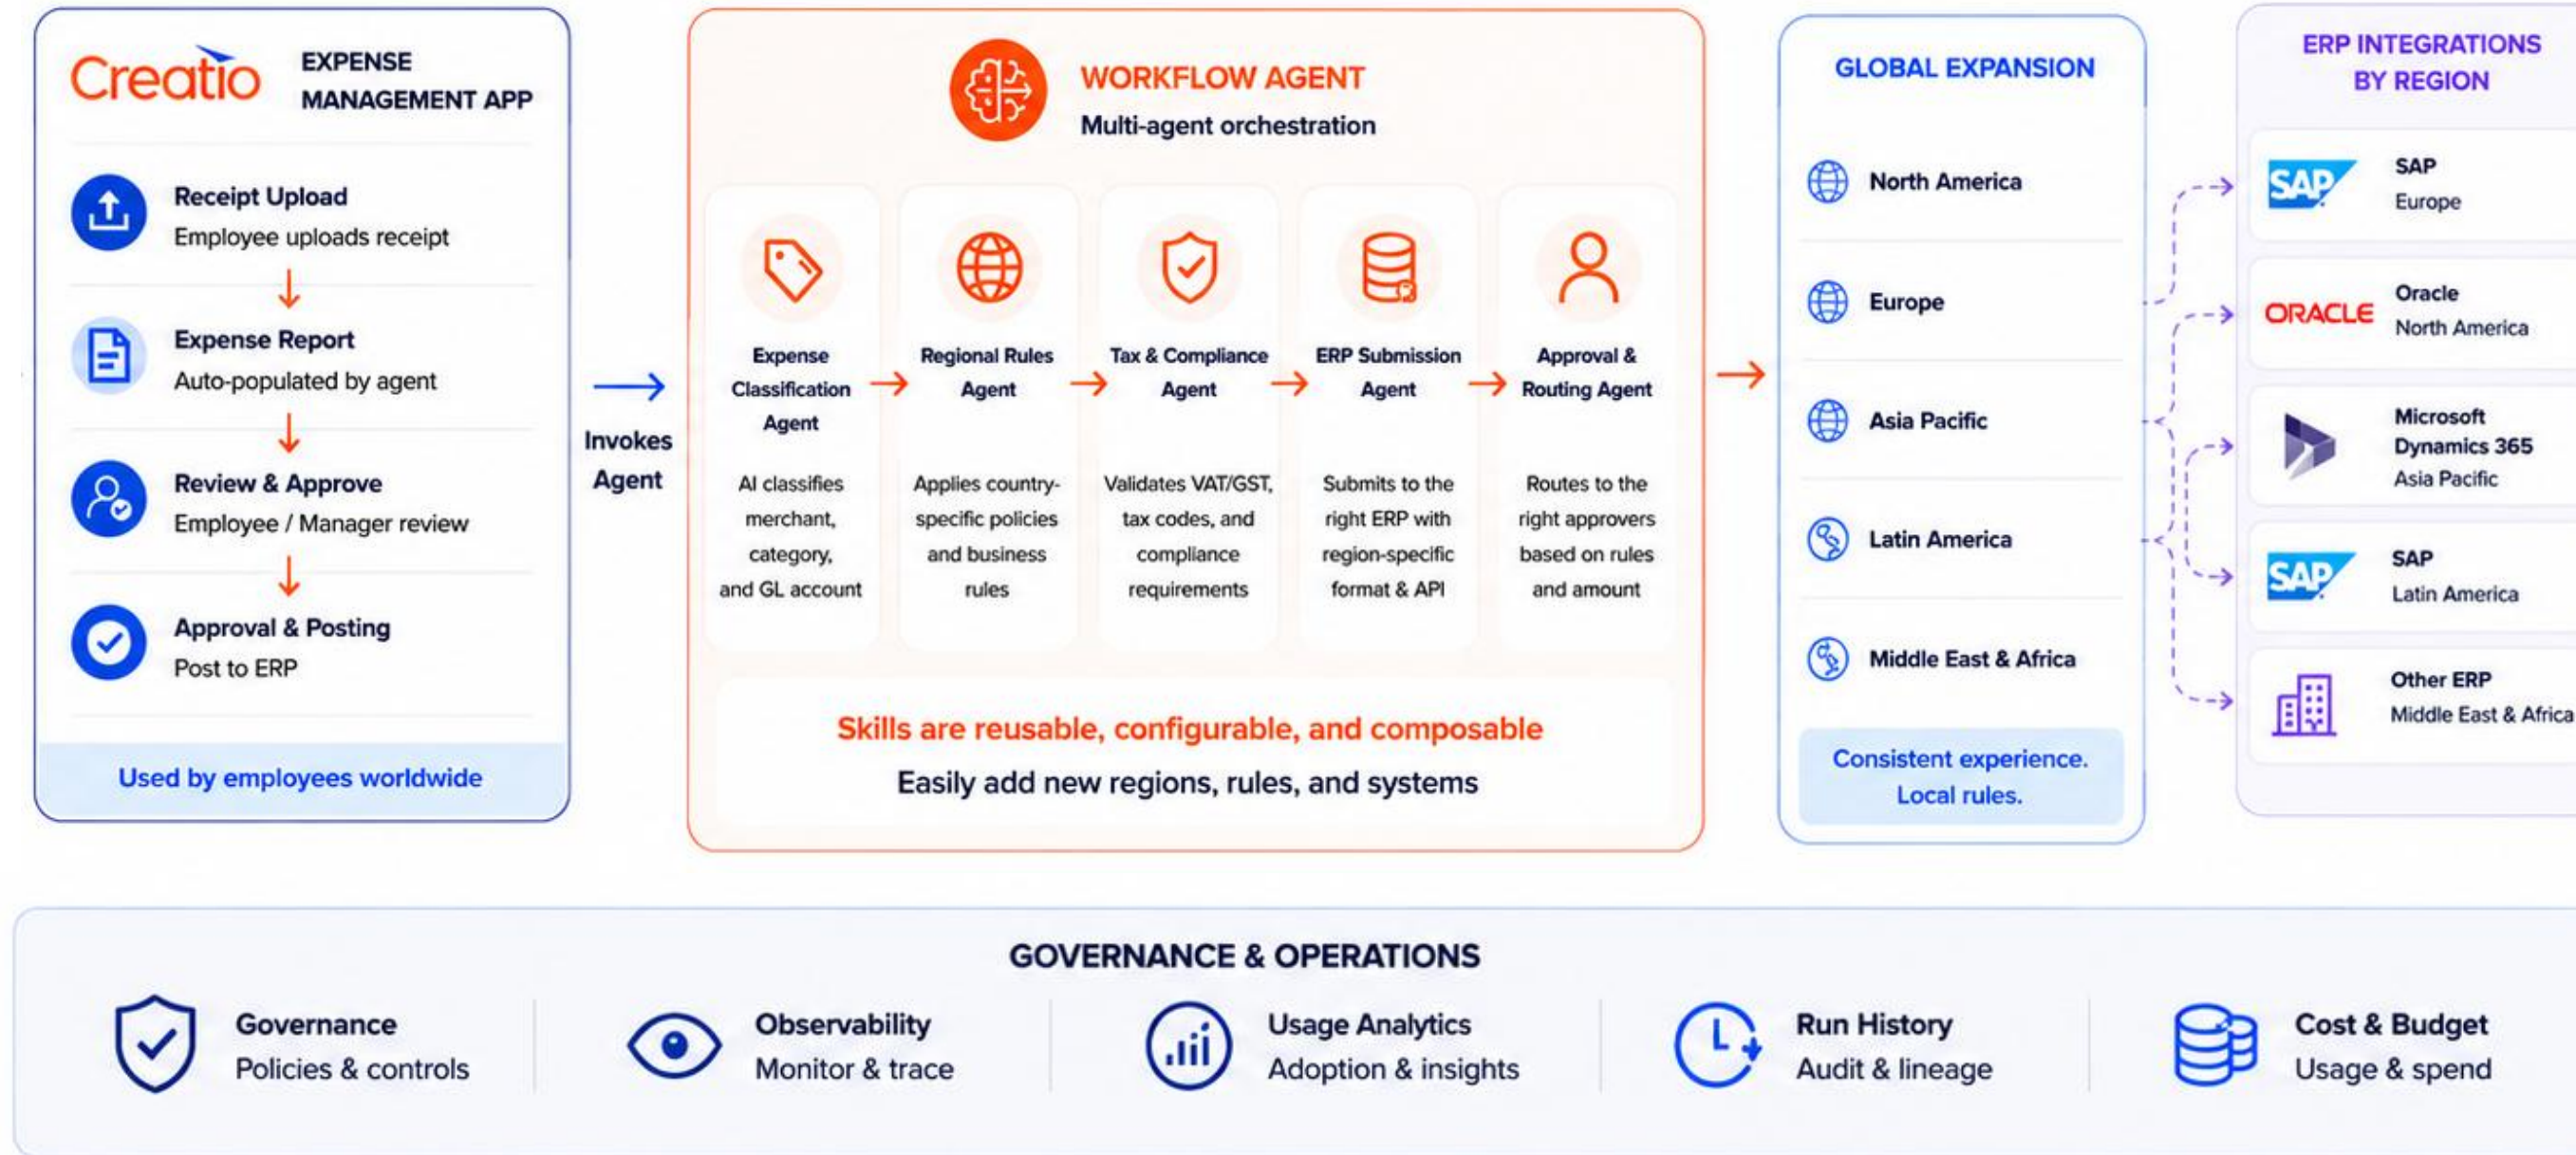

**EVERYDAY DELIVERY**

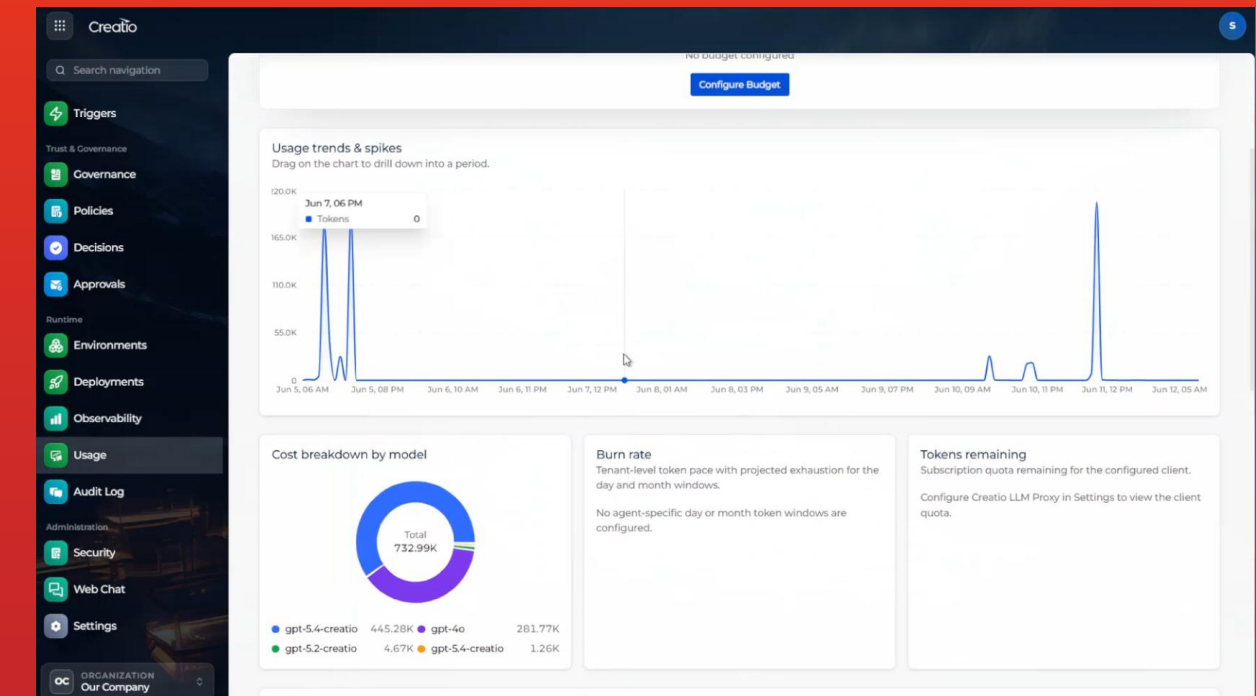

# Reimagine the way your business continuously improves every day

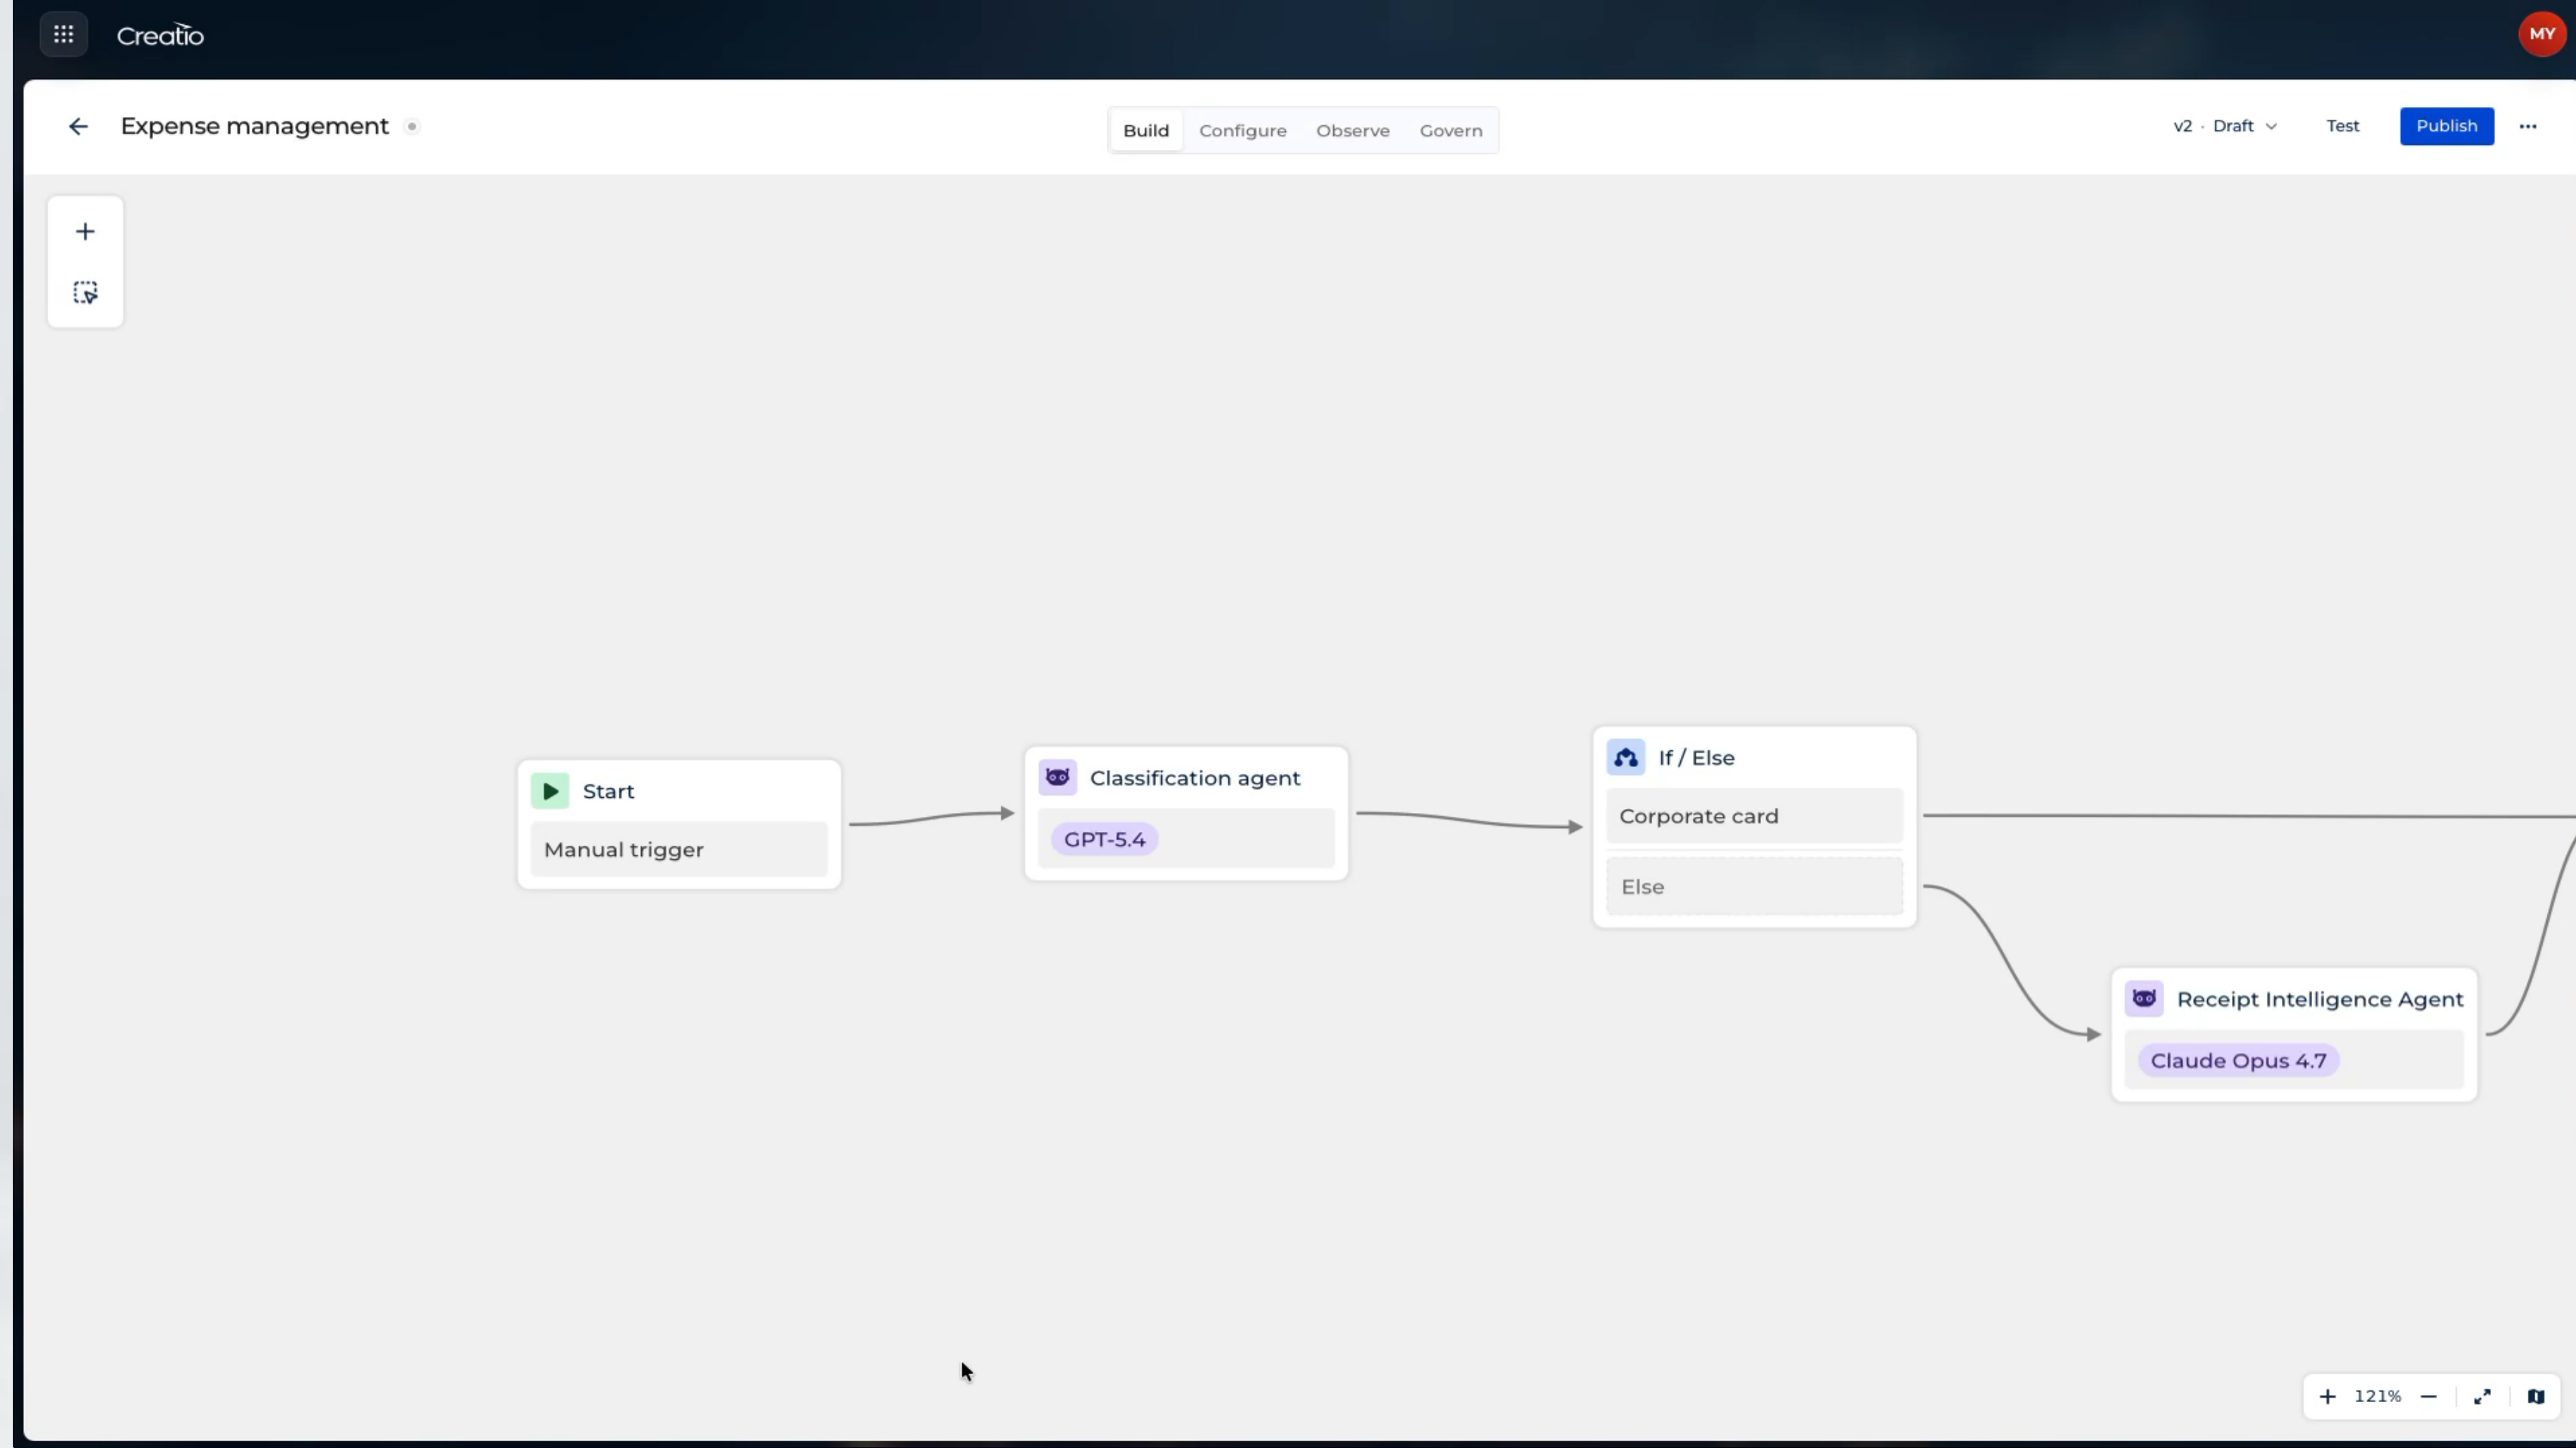

**KIRILL KRYLOV**

# Results Delivered: AI-Powered Expense Management

## 1. Faster Delivery

- ✓ MVP rapidly prototyped with Coding Agents
- ✓ Reduced time from idea to working application

## 2. Greater Efficiency

- ✓ Automated receipt processing and classification
- ✓ Reduced manual effort for employees and Finance teams

## 3. Improved Accuracy & Compliance

- ✓ Consistent categorization and validation
- ✓ Automated tax and vendor verification

Kirill didn't just build a no-code application.

He transformed a manual finance process into an intelligent, continuously evolving business system.

Accelerating Development by Building, Deploying, and Evolving Solutions **10X Faster!**

# Accelerating Development **10X** goes beyond individual productivity

## The organizations that win will:

- Combine no-code and AI-driven engineering to take on more simultaneous projects
- Apply Coding agents + AI assisted development across the lifecycle
- Govern AI on unified platforms
- Scale continuous innovation

Don't just automate developer tasks.

Reimagine the development lifecycle as a complete system.

The next era of enterprise software delivery has already begun!

Creatio
